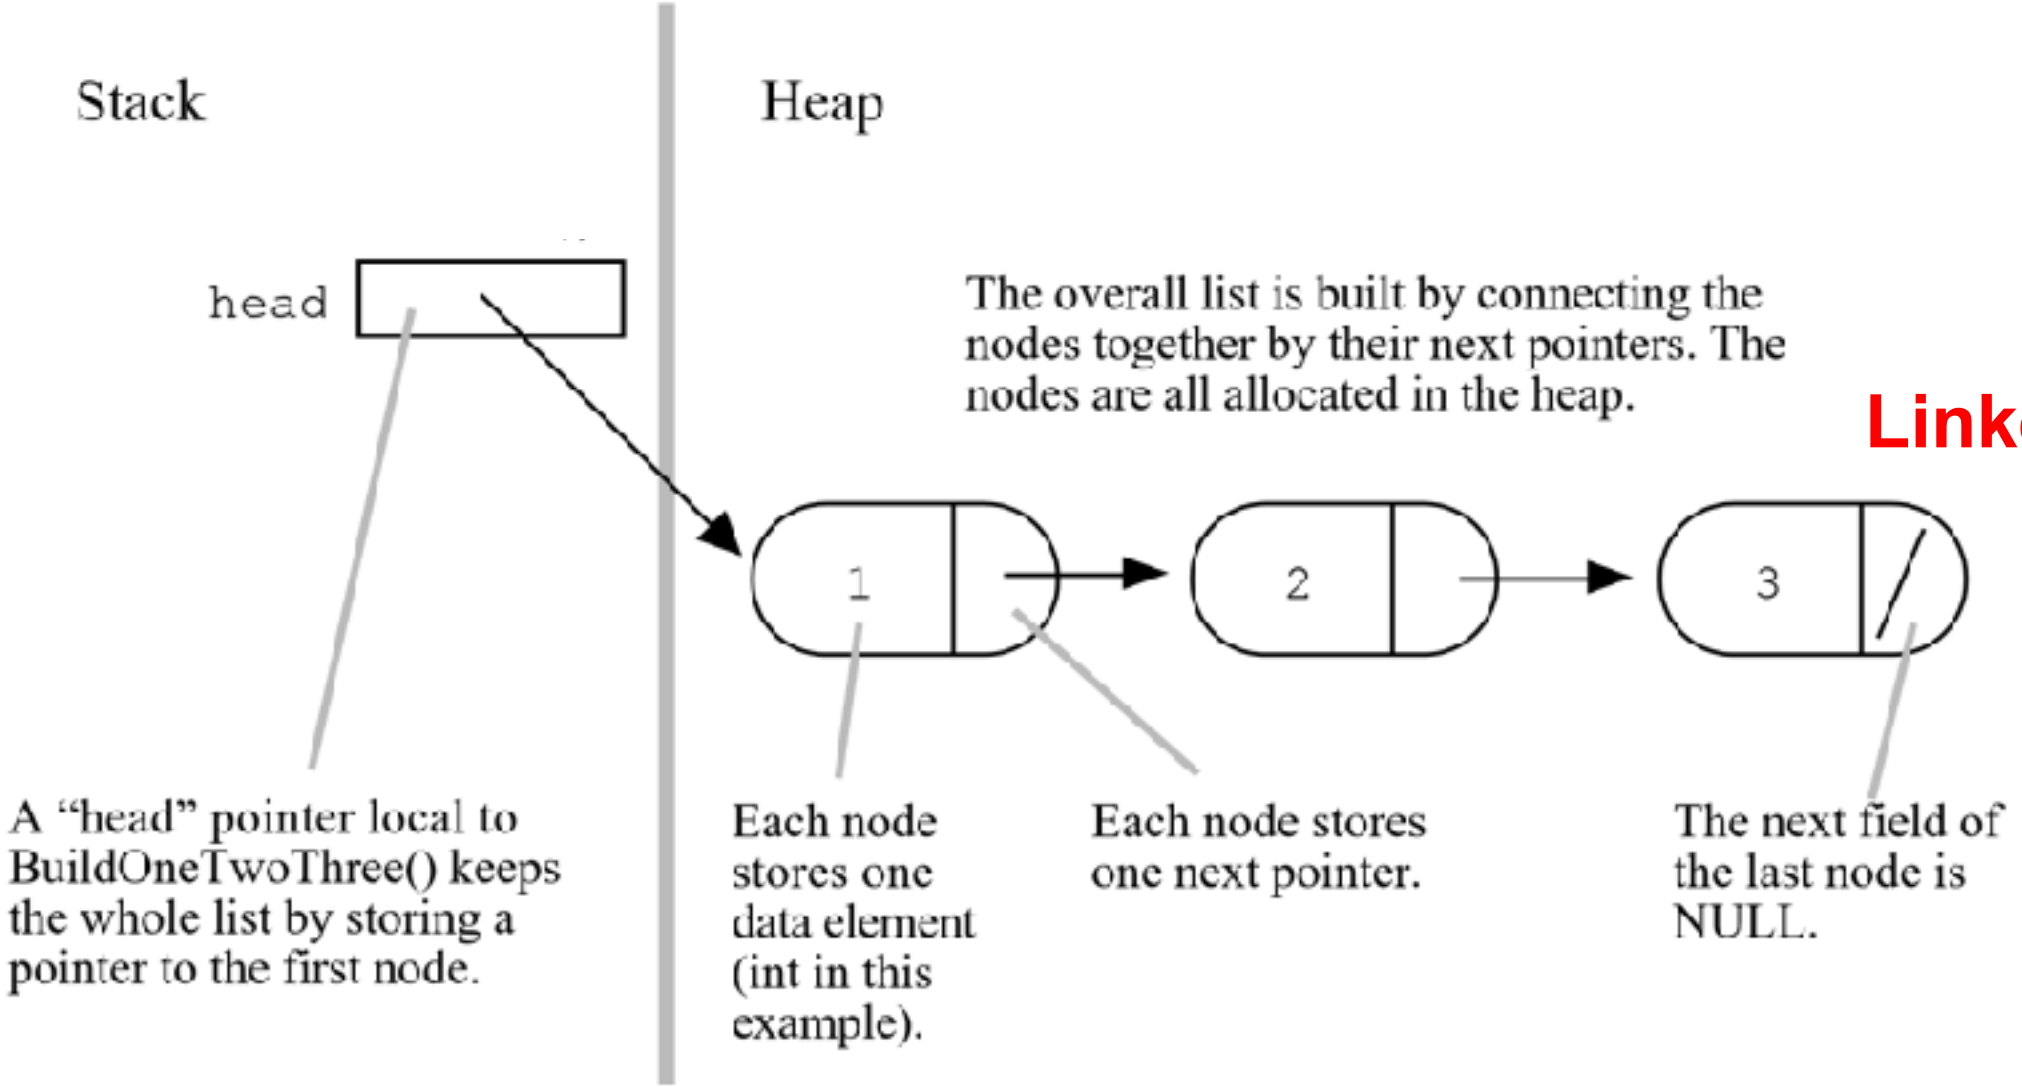
MORE LINKED LISTS

Problem Solving with Computers-I

Linked Lists

Array List

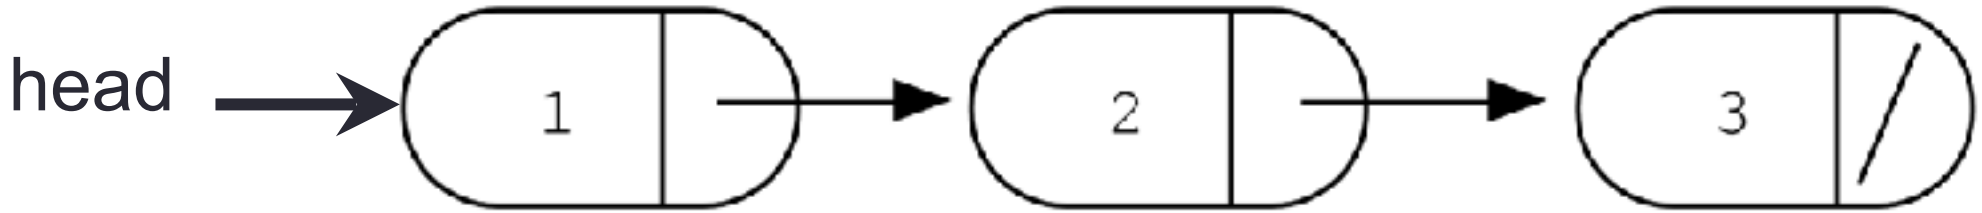
The Drawing Of List {1, 2, 3}



Linked List

Accessing elements of a list

```
struct Node {
        int data;
        Node *next;
};
```



Assume the linked list has already been created, what do the following expressions evaluate to?

1. head->data
2. head->next->data
3. head->next->next->data
4. head->next->next->next->data

A. 1
B. 2
C. 3
D. NULL
E. Run time error

Creating a small list

- Define an empty list
- Add a node to the list with data = 10

```
struct Node {
      int data;
      Node *next;
};
```

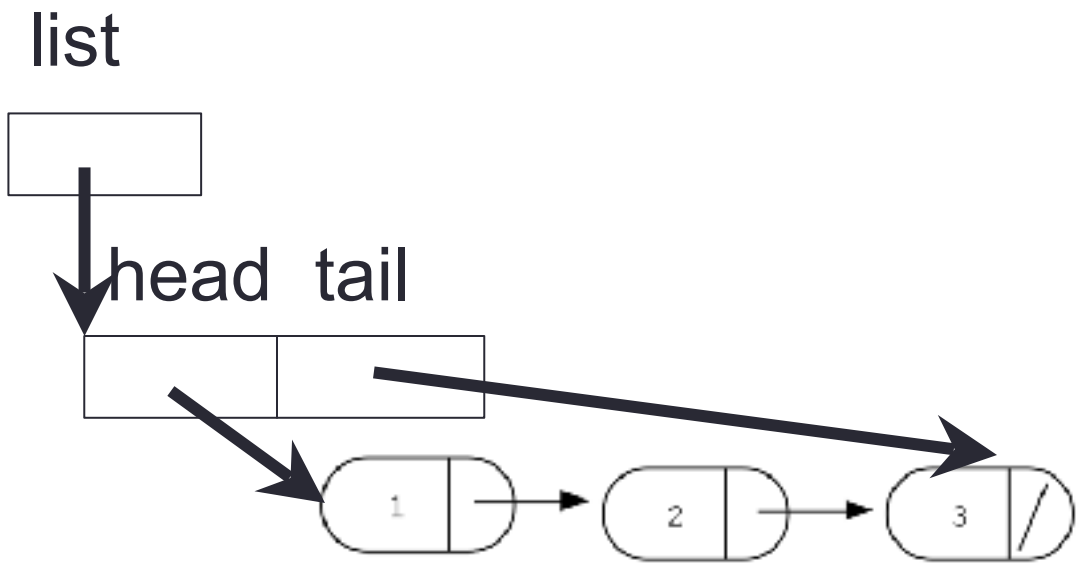
Inserting a node in a linked list

```
Void insertToHeadOfList(LinkedList* h, int value) ;
```

Iterating through the list

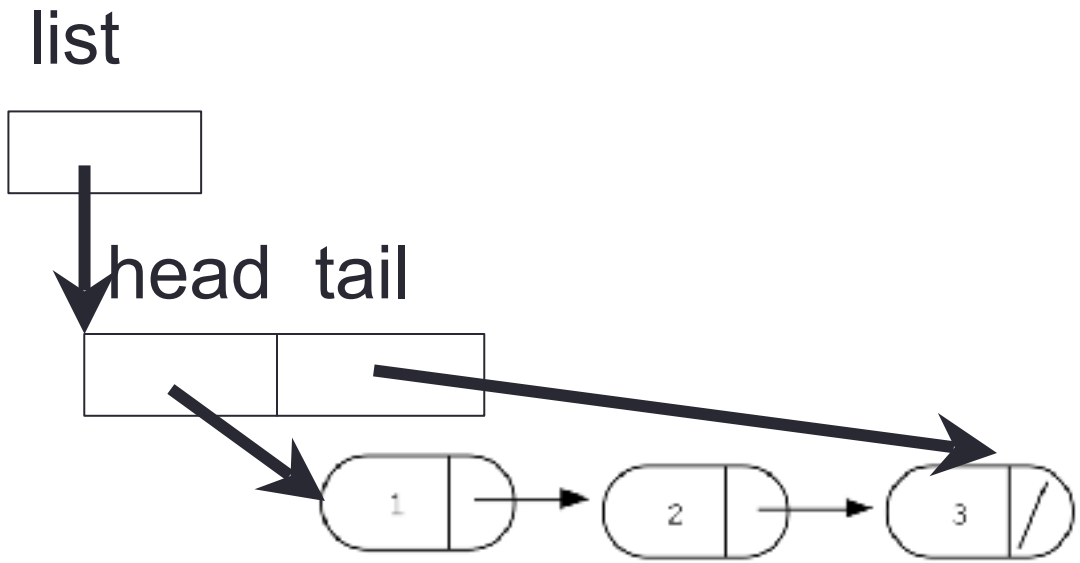
```
int lengthOfList(LinkedList * list) {
   /* Find the number of elements in the list */

}
```



Deleting the list

```
int freeLinkedList(LinkedList * list) {
   /* Free all the memory that was created on the heap*/
}
```



Q: Which of the following functions returns a dangling pointer?

```
int* f1(int num){
     int *mem1 =new int[num];
     return(mem1);
}
```

```
int* f2(int num){
      int mem2[num];
      return(mem2);
}
```

A. f1

B. f2

C. Both

Next time

- More linked lists
- Dynamic arrays
- Dynamic memory pitfall
